Water Shortages – AWWA Webcast

(DENVER, CO) – On Wednesday, April 8, AWWA will host the Water Shortages: Finding a Solution webcast. Water shortages are a growing issue for utilities across the continent. Droughts may reduce surface water and groundwater supplies; environmental regulations may unexpectedly complicate availability and use of supplies; hurricanes and other natural disasters may cause systems to fail; and business decisions or legal positions may dictate shifting from one source of supply to another.

AWWA's focus during this webcast will explore Water Reuse, Aquifer Storage and Recovery, and how Low Inflow Protocol strategies can help a utility during a water shortage.

Webcast presenters include:

- Maeneen Klein, Conservation Program Manager, Charlotte-Mecklenburg Utilities
- Fred Bloetscher, Assistant Professor of Civil Engineering, Florida Atlantic University
- Larry Schimmoller, Global Technology Leader, Water Reuse at CH2M HILL

For more information on webcasts and registration details, go to www.awwa.org/Education/webcasts.

###

AWWA is the authoritative resource for knowledge, information, and advocacy to improve the quality and supply of water in North America and beyond. AWWA is the largest organization of water professionals in the world. AWWA advances public health, safety and welfare by uniting the efforts of the full spectrum of the entire water community. Through our collective strength we become better stewards of water for the greatest good of the people and the environment.
